Streambox®

Advanced streaming solutions for every workflow

Remote Collaboration

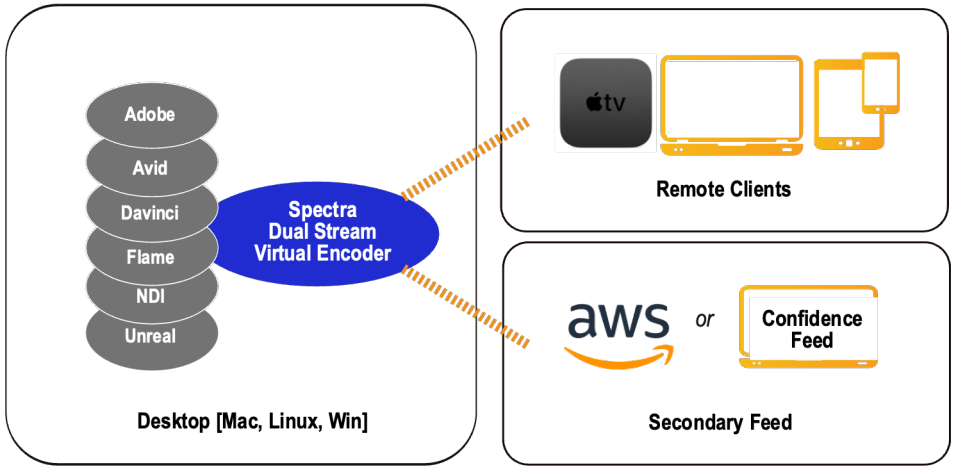

Ultra Low Latency

Ultra Reliable Transport

Up to 4K 4:4:4 12-bit

Spectra Software Encoder

Fully-integrated, high-performance streaming capability for popular desktop applications

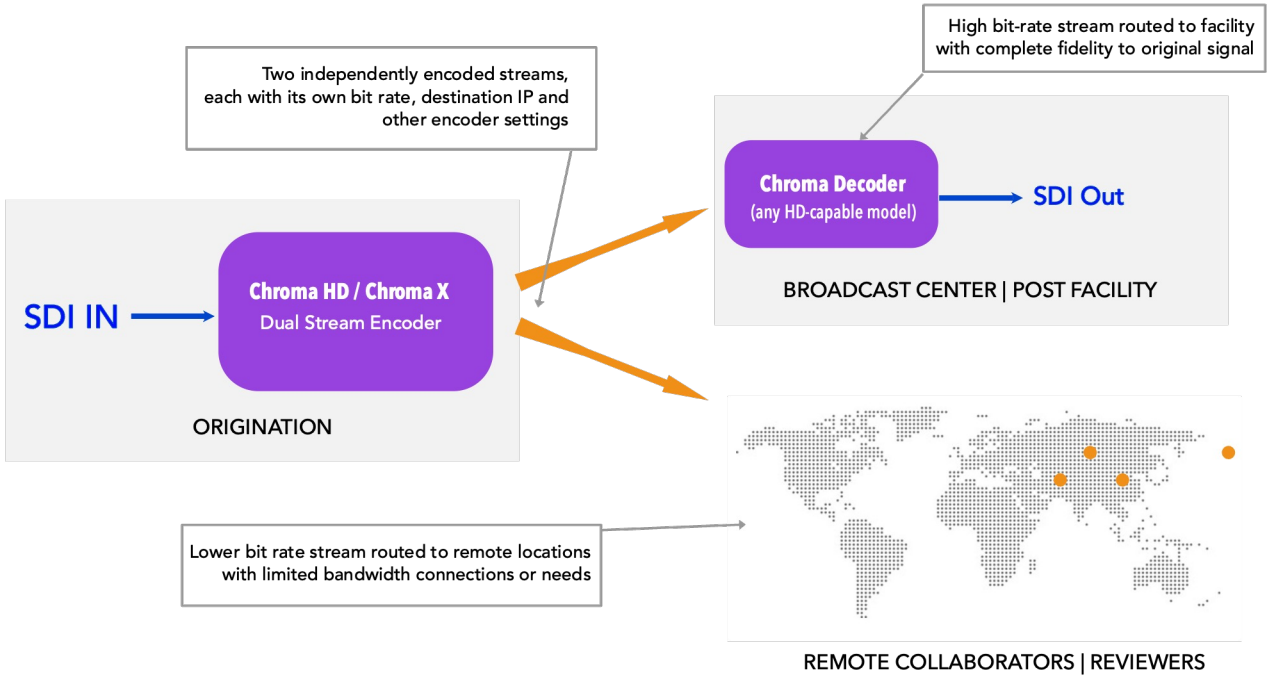

Provides streaming capabilities for your creative platform – no messy cables or external hardware.

Dual outputs provides flexibility – each output can be configured independently for both destination and bitrate. Also provides audio monitoring for some apps that do not support multiple output clients

Chroma X

Stream any SDI signal to multiple locations

REMI Workflow for Broadcast

Ultra Low Latency

Up to 4K 4:4:4 12-bit

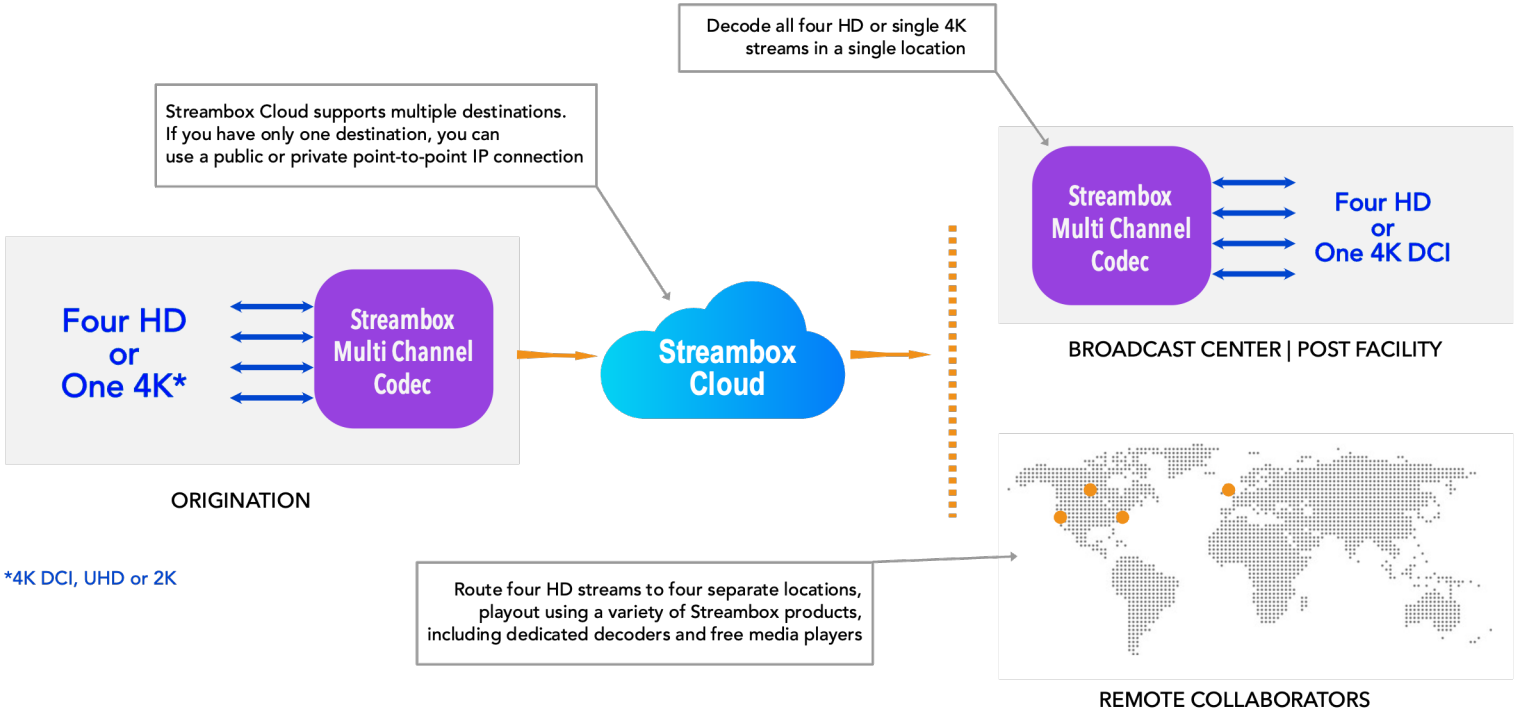

4 Ch HD with Synched Outputs

NEW ST 2110 support

Support for Sony UHFR Cameras

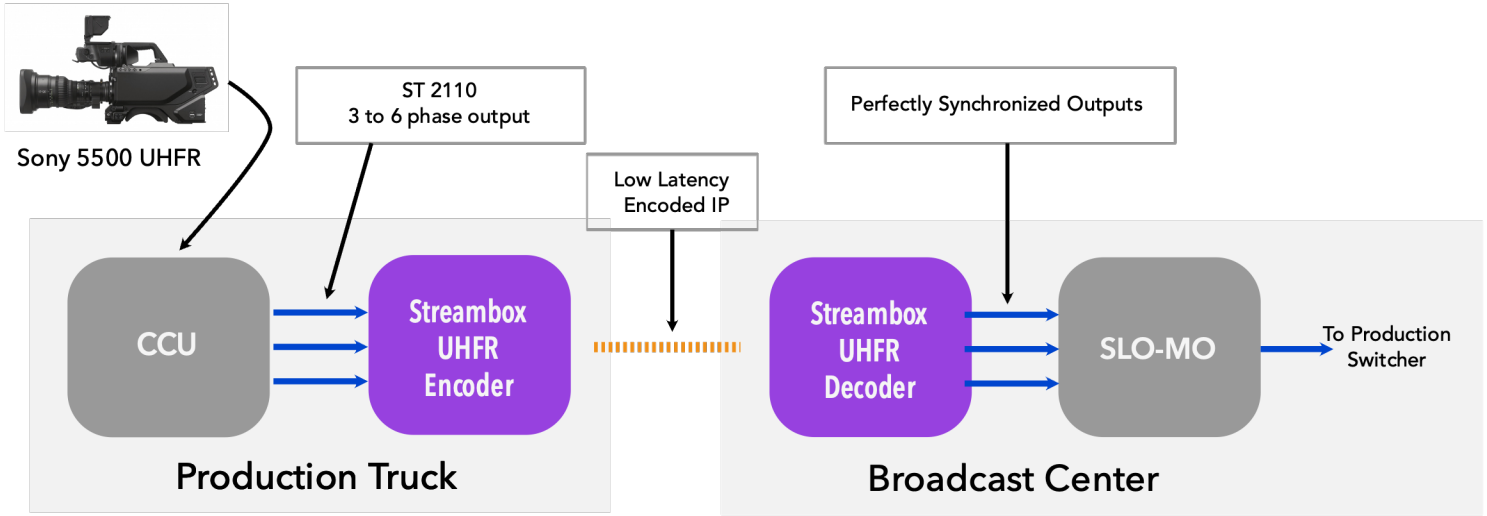

Multi-Channel Streaming Encoders

High performance solutions for multi-camera REMI workflows

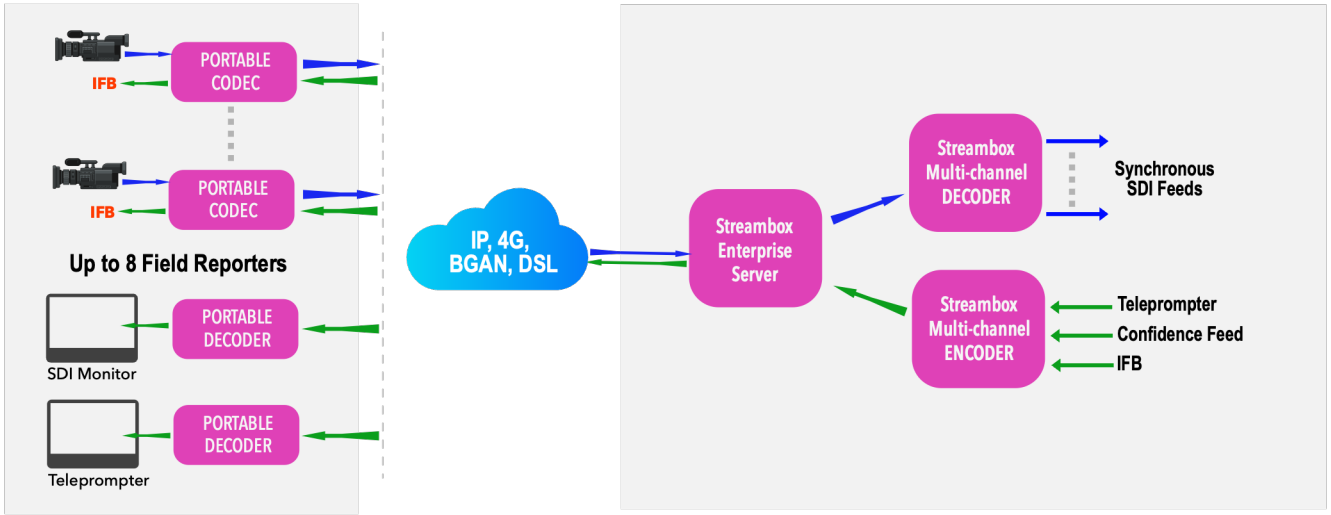

REMI Production for Slo-Mo Playback

CCU splits the HFR signal into three phases, which is then encoded, sent over IP to a Streambox decoder. Output is sent to a remote Slo-Mo with perfect synchronization between phases.

Live Content Contribution

Reduce the cost and complexity of covering live events. Streambox solutions provide more agile solutions than satellite or microwave connections, with full support for synchronized feeds and IFB.

Connectivity

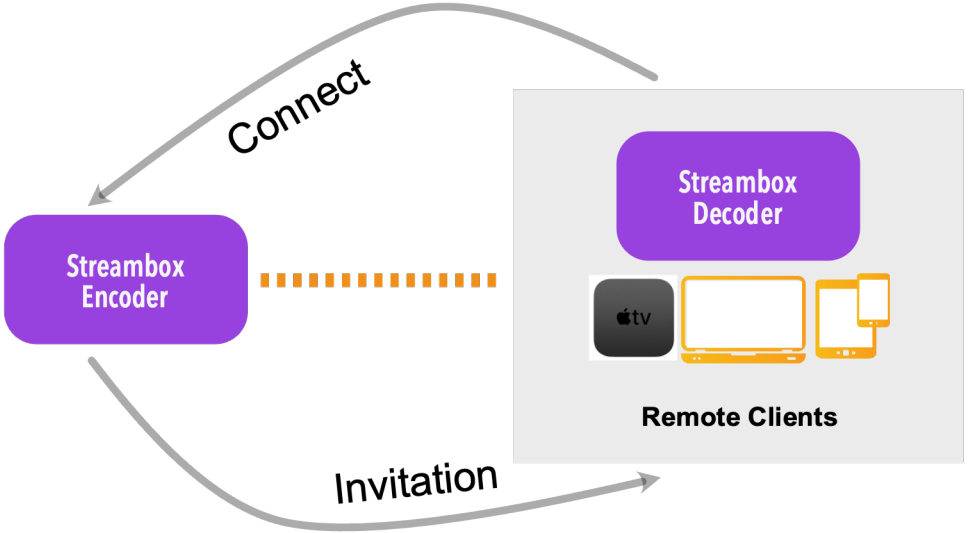

Point-to-Point

NEW Streambox Server

Multi-client & multi-session workflows

Point-to-Point Connection

Simplify connections for remote sessions over IP

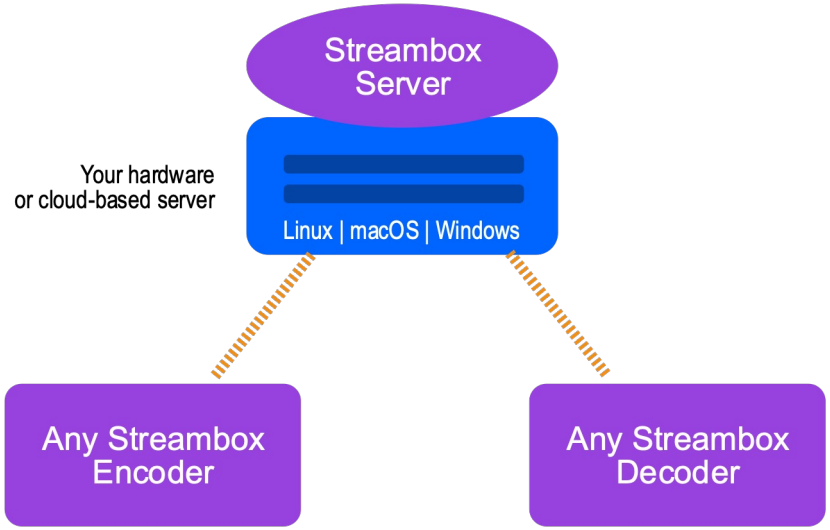

Simple as can be, no IT specialist required.

Send a session invite to any Streambox decoder and they simply click to connect to your session (using a Broker – but they don't need to know that…).

Streambox Server

Super flexible streaming server on your hardware

Hate having to pay for data usage in a streaming session? Welcome to Streambox Server, your very own in-house or cloud-deployed server, capable of supporting multiple clients and multiple simultaneous sessions. Streambox Server runs on macOS (perfect for Mac Mini), Linux and Windows and works with the entire range of Streambox encoders and decoders.
